Lab Task # 1

Note: Submission guidelines are provided at the end. Failing to follow the guidelines will result in marks deduction.

Task 1: Database Creation and Management in MS Access Objective:

Create and manage a database in MS Access, involving table creation, data entry, relationship setup, and form design. **Instructions:**

1. **Database Setup:**
    - Create a new MS Access database file named rollno_name_lab1.accdb.
2. **Table Creation:**
    - Students Table:
        - Create a table named students.
        - Add the following fields with appropriate data types:
            - ☐ Roll No: (Primary Key, Data Type: AutoNumber)
            - ☐ Student Name: (Data Type: Short Text)
            - ☐ Address: (Data Type: Short Text)
            - ☐ Contact Number: (Data Type: Short Text)
    - Academics Table:
        - Create a table named academics.
        - Add the following fields with appropriate data types:
            - ☐ Roll No: (Primary Key, Data Type: AutoNumber)
            - ☐ Credits: (Data Type: Number)
            - ☐ Grades: (Data Type: Short Text)
            - ☐ CGPA: (Data Type: Number)
3. **Data Entry:**
    - Switch to Datasheet View and enter one record in each table.
4. **Establish Relationships:**

- Create a relationship between the students and academics tables using the Roll No field as the common key.

5. Form Creation Using Form Wizard:

- Using the Form Wizard, add four additional records to each table.
- Create forms for both the students and academics tables that display multiple records at once.
- Additionally, create split forms for both tables, allowing simultaneous viewing and editing of data.

Task 2: Install the SQL Server and SQL Server Management Studio (SSMS) by following the steps in the manual provided.

Submission Instructions:

1. First, rename your files as i22xxxx_FullName_Lab.
2. Submit all the files on GCR
3. Please ensure that your submission is on time; late submissions will not be accepted.
